Brain Injury Clinics

Concussion Clinic

The Concussion Clinic was created in recognition of the “silent epidemic”. Most people who suffer a concussion go unrecognized in the community. According to the CDC, approximately 1.4 million Americans are treated and released from hospital emergency rooms annually. Most are told that they have suffered a mild traumatic brain injury or concussion, and are released without education or follow up with a provider well versed in treating post-concussive symptoms. The Concussion Clinic at San Francisco General Hospital provides patients with expert knowledge and treatment of the multitude of post-concussive symptoms that can plague patients for months after their injury.

- Held the 3rd Thursday of every month
- 4M Clinic, 4th Floor of main hospital building
- Submit an eReferral to the Concussion Clinic for an appointment
- Call 415-206-4094 for more information

Traumatic Brain Injury Clinic

The Traumatic Brain Injury Clinic was developed to provide a comprehensive assessment of patients with complex social and medical needs. A multidisciplinary team including Neurosurgeons, Neurologists, Psychiatrists, Neuropsychologists, and Social Workers screens patients and refers them to appropriate services in order to maximize rehabilitation efforts, assist with community reintegration, and minimize morbidity associated with traumatic brain injury. This unique clinic meets on a monthly basis and provides care to mildly, moderately and severely brain injured patients from San Francisco County.

- Held the 1st Thursday of every month
- 4M Clinic, 4th Floor of the main hospital building
- Submit an eReferral to the Neurosurgery Clinic for an appointment
- Call 415-206-4094 for more information
